For authors and referees

Your contributions to *Chemical Technology* are solicited. They can take the form of reports of original work, state-of-the-art surveys, critical discussions of technical and nontechnical subjects that impinge on the industrial practice of chemistry and engineering and, of course, contributions to any of the regular departments. The prime criterion for selecting material is that it be of broad interest to those in industry.

Style

No rigid style criteria are imposed. Instead we prefer that each author select a framework that is most comfortable to him and his subject. He should of course bear in mind that CHEM TECH is *designed to be read*. It is primarily a current awareness vehicle, although it will have archival value. Style should be free, terse, and active. The case history form of reportage is encouraged as are any other "personal" forms. For additional thoughts in this vein the classic tiny volume "Elements of Style" by Strunk (*1*) is recommended. Technical style should follow the ACS "Handbook for Authors" (*2*).

Refereeing

Advance reviewing of manuscripts by competent practitioners is vital to an authoritative publication. Refereeing is seen as a professional obligation to be assumed when an individual's career reaches an appropriate point. We recognize fulfillment of this obligation by publishing the names of reviewers and, where appropriate, their comments; both of course with the referee's permission. Should you like to be a CHEM TECH referee, contact The Editor.

Since refereeing is costly in time and money, not all papers are refereed by outsiders. Outside reviewers are used at The Editor's discretion.

The manuscript

Manuscripts should be double-spaced. Ideal length is 18–22 pages which will print up as 5–6 pages. Shorter

contributions are welcome and longer ones can often be handled serially. Each manuscript should be sent in *triplicate* and be accompanied by photos and biographies of the authors. It is preferred that the latter two items be informal.

References

List references at the end of the article in order mentioned in the text. Put citation numbers in parentheses on the line both in the text and in the listing at the end. The numbers in the text will appear in italics in the printed version.

Illustrations

Again, to enhance immediate impact, illustrations of all kinds are solicited: Photos, drawings, graphs, tables, etc., all should be camera ready: sharp, contrasty, glossy, and preferably 8 × 10 in. Care should be taken that lettering is large enough to be legible after reduction. The "Handbook for Authors" (*2*) is particularly helpful here. Color will be used wherever possible. Informal sketches are welcome if they are clearly presented. Our own art staff is available for consultation and help.

Page charges and reprints

CHEM TECH makes *no* page charges, and reprints are available.

Correspondence

Manuscripts and all matters pertaining to editorial content should be sent to:
